Brief

Sheffield Doc/Fest (SIDF) is the UK's premiere international documentary festival, welcoming over 32,000 documentary makers and enthusiasts each year, including 3,500 industry delegates from over 60 countries. The SIDF Awards Ceremony is the Festival's **core** means of celebrating the best documentary films and interactive projects being produced in the world today.

SIDF is seeking a physical award that honours the Festival's passion for these films and projects – something that filmmakers will be proud to accept. SIDF is an international event but it also has a great sense of local presence, audience and pride. The physical award must therefore represent this local pride. It must be regionally produced and bear a sense of the city of Sheffield.

Important Considerations

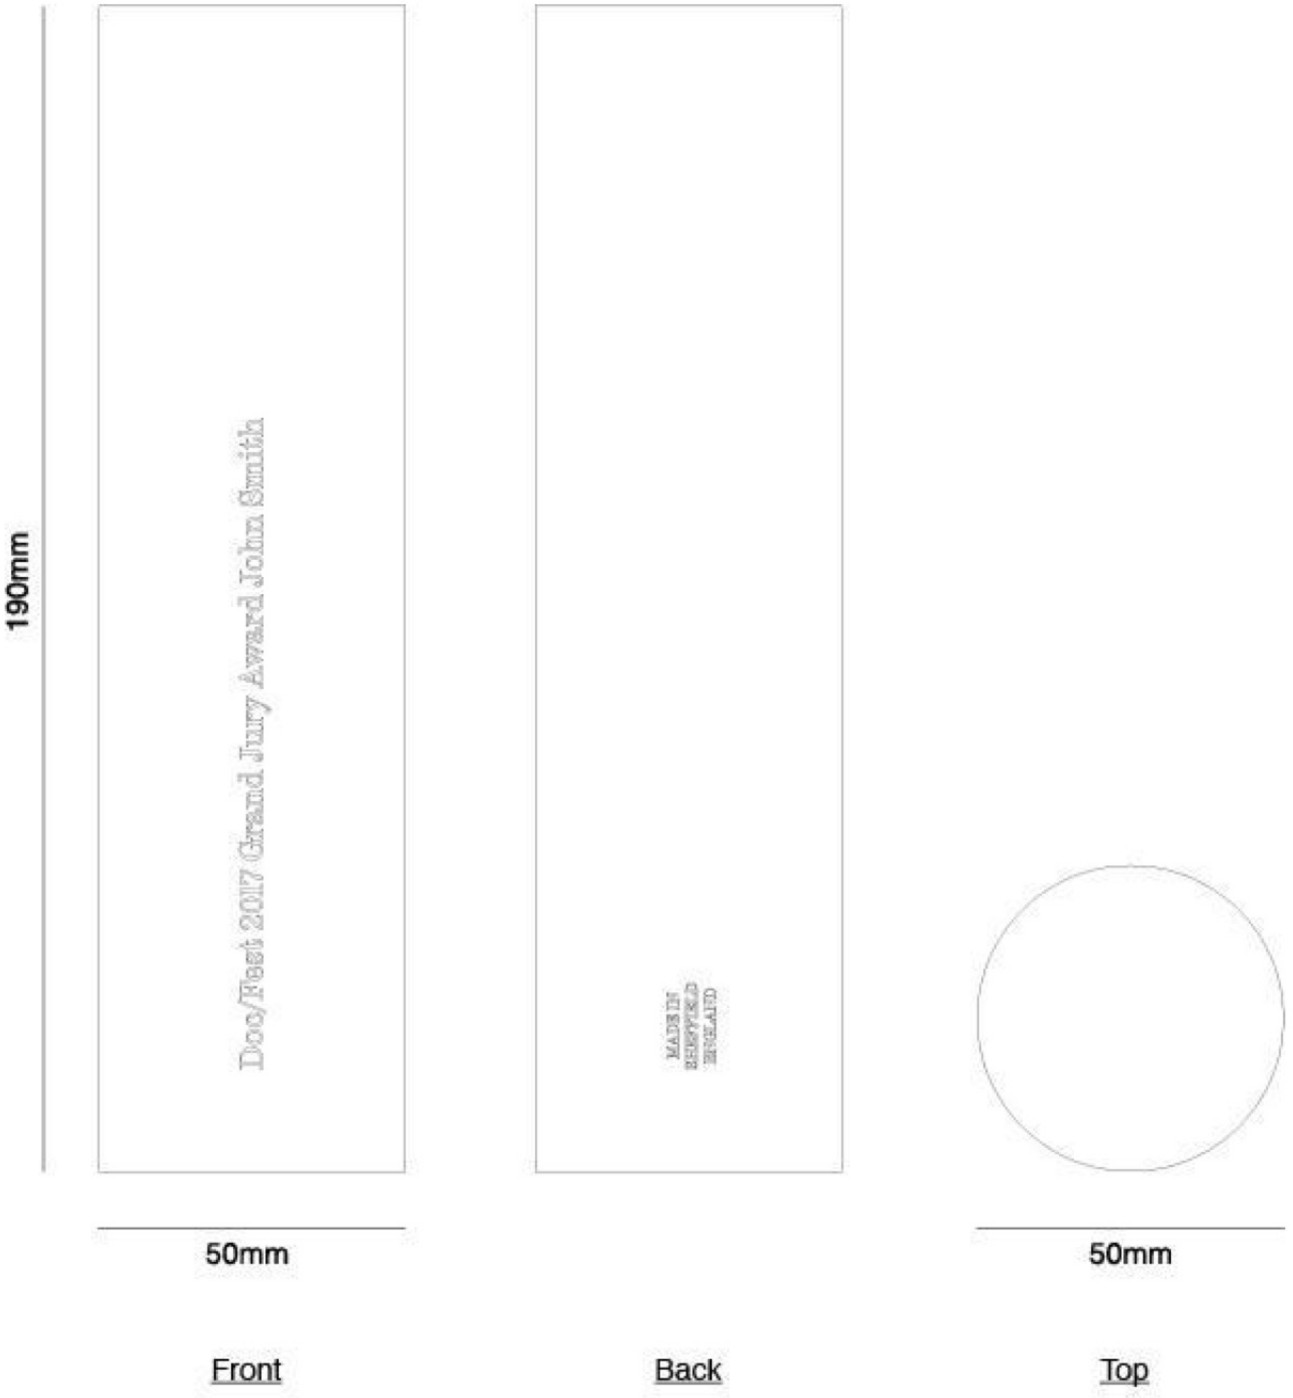

- The awards must be made of steel or another material symbolic of Sheffield
- Must be regionally produced
- Must be bold and sculptural
- One piece, freestanding and no taller than 350mm
- Suitable weight for airplane hand luggage
- Must have room for engraving
- No sharp edges
- Engraving must take place between **[DATES]**
- Must acknowledge the key values of respect, humanity, braveness, creativity and independence
- **12** awards to be produced with **3** spares

Proposal

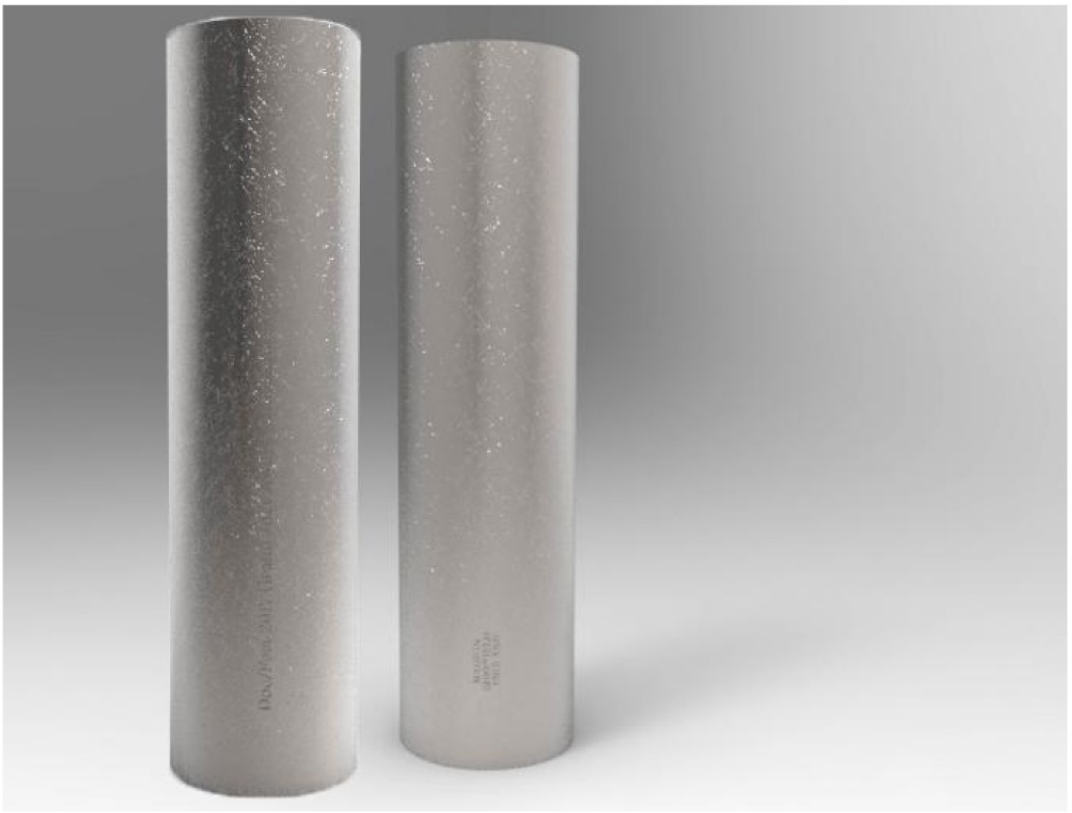

Design

My design – known by its nickname as the “Steel Core” - will consist of a solid round bar of high-quality Stainless Steel. It will stand on either of its ends, will be 190mm high, have a diameter of 50mm and will weigh 3kg. It will have a brushed surface finish and any text will be engraved lengthways. It will also have an engraved “MADE IN SHEFFIELD ENGLAND” stamp.

Typeface

I have been given exclusive permission from the University of Sheffield to engrave my design using the Stephenson typeface, an enhanced version of a design by Sheffield company Stephenson & Blake Co. Typefounders, established in 1818. At the height of Sheffield's power as a producer of steel, Stephenson & Blake was the world's largest manufacturer of metal type. The company's founder Sir Henry Stephenson went on to help found the university. I feel it would be fitting if the award were engraved using Stephenson, which strikes a balance between the traditional and the modern, as my design seeks to do. Using Stephenson would contribute to the discourse around the typeface while honouring Sir Henry Stephenson and the University of Sheffield.

Rationale

Respect
Bravery
Creativity
Independence
Humanity

My design aims to evoke Sheffield's rich history in an object that is simple, beautiful, original and recognisable. Its proud form, steely surface and generous weight are a nod to the spirit of those whose hard work was crucial to the growth and influence of the city of Sheffield.

The Steel Core needs no plinth; it stands independently as a symbol of industriousness and integrity. It needs no fanciful decoration; its unfussiness reflects the pretention-free nature of the people of Sheffield.

The Steel Core represents a coming-together of energy and substance to create new matter. In this way, it signifies creative action and collective endeavour. It is an embodiment of the collective human spirit.

The baton-like shape of the Steel Core makes it a joy to grasp, to hold and to pass on. "Passing on the baton" is the symbolic gesture of giving responsibility to another for an important task, thereby implicitly acknowledging their maturity and ability. It is emblematic of teamwork and a mark of respect.

The engravings running lengthways and the clean cuts at both ends indicate that the Steel Core has been cut from stock. As each core follows and precedes other cores, so each award follows and precedes other awards, linking the past with the present and the future.

Production

Timescale

The Stainless Steel cores will be cut to size and purchased from Sheffield-based company Cogne UK Ltd. The lead-time for this is seven working days including delivery to my London studio.

I will clean and finish the cores in the metal workshops of the Royal College of Art, Howie Street, London SW11 4AY, commencing **[DATE]**.

Doc/Fest representatives will collect the finished cores on [DATE] from me in London and transport them to Sheffield, where they will be stored ready for engraving.

Sheffield-based company Laser Mark Sheffield will engrave the cores. The lead-time for this is one working day and will take place on **[DATE]**. I will be present on **[DATE]** to oversee the engraving and deliver the finished cores to Doc/Fest at **[TIME]**.

Total production time is 15 working days.

Costs

15 x Stainless Steel cores[1] (316 1.4404) 50mm x 190mm Inc. shipping *Cogne UK Ltd* *Uniformity Steel Works* *Sheffield S9 2UD*	£
Engravings on twelve awards *Laser Mark Sheffield* *40 Alison Crescent* *Sheffield S2 1AS*	£
Artist's labour time:	£
Total cost	£1,000 (Inc. VAT)

[1] Three spare cores in case of additional demand
